

Introduction

Sabercom offer employee communications systems which range from one reception screen to hundreds of screens across multiple sites.

Sabercom allows you to push corporate information in the form of PowerPoint, SharePoint, web content, intranet and instant messages to screens located around your office. Sabercom will create branded templates to match the look and feel of your corporate identity.

Reception Screen Solution

An easy to install solution for reception screens that are just showing TV (eg Sky or BBC News 24). Sabercom provide some easy to use drag and drop software that allows users to add live content to their reception screen including web and intranet pages, PowerPoint presentations and even radio stations. All managed through a web browser from any PC within your office.

What makes Sabercom different?

Consultation...

We offer a complete solution from initial consultation right through to ongoing maintenance and services.

Easy to use...

We use a Windows-style interface for a familiar look and feel. Simple day to day tasks are made easy and can be assigned to individual people.

Easy to deploy...

Our software is simple to install, configure and run. This keeps service costs down and starts delivering ROI more quickly. We also offer a hosted solution which allows for minimal input from your IT department.

Hosting...

Sabercom also offer a hosted solution where the software is located on our secure webserver. We will set up the system from our office. No expensive servers or software required, and all for one simple monthly cost.
